

## **MeZoo™ : Enhancing Experiential Learning for School Children**

The Mobile Encyclopedia of the Zoo (MEZoo™) is an online system that delivers information about animals and plants in Zoo Negara Malaysia using a smartphone and QR code. This smartphone-based information system consists of a user interface and an inventory of animals and plants in Zoo Negara, Malaysia.

Nowadays, many of us has a smartphone. By creating this smartphone-based information system, we hope that it could help improve visitors (children, parents etc) knowledge about the animals and plants that are exhibited in Zoo Negara. This is also one of the initiatives that could help Zoo Negara to become a world class zoo. In addition, MEZoo™ could provide experiential learning experience to the children, much more powerful than books, comics or TV nature shows. This could attract the attention of children because the smartphone-based information system can give them an additional learning layer, beyond the traditional classroom learning or books. This is one of our main goal which is to provide a smart strategy to expose our children to the vast world of nature together with the use of smartphones. It is an exciting and fun way to learn and study about the animals and plants in Zoo Negara. The children will be inspired to learn more, care more, and do more to save animals and plants and as well their habitats.

The current information board about animals in the Zoo Negara has only little information about the animals such as, amazing facts, habitat and food. In order to provide more information to the visitor, each animal in the Zoo Negara was designated a specific QR code which is placed on the information board (Figure 1). Visitors will scan the QR code

using their downloadable QR code reader apps (eg. NeoReader, Quick Scan, QR Reader, and QR Scanner) in their smartphones and information about that particular animal will be readily available on their phone screen. Visitors do not need to spend much time to search for more information about the animals because they just need to scan the QR code and within a few second, the information will be displayed on their smartphone screen.

The information in the system comprises of species name, life span, colour, weight, food, habitat, behavior, reproduction, photos, videos, sounds, and other relevant information about the animals. Besides that, there are games and quizzes also being added in the system which is specially developed to seek the attraction of the children. The URL has been provided in the system and they just need to click the link. Children can learn and at the same time can play exciting games and solve interesting quizzes during their visit to Zoo Negara. Perhaps, this system will replace the manual system that has been used to deliver the animal's information such as paper base-form, pamphlet and books.

Apart from the animal information, MEZoo™ also delivers information about plants available in the Zoo Negara. Malaysia is well known for its huge biodiversity including of flora and fauna. More than 15000 higher plant species have been found in Malaysia due to the wet tropical climate, favorable conditions for the growth and evolution. Among them, several categories of plants such as palms, trees, shrubs, exotics, and herbal can be identified in Zoo Negara. The information about these plant species in the system comprises of scientific name, local name, taxonomy, origin, habitat, life span, usage and also their exact location in the zoo. Similarly, each plant species in the Zoo Negara will be designated with a specific QR code which is placed on the information board. Again, the visitors need to scan the QR code and all the information will be displayed on their smartphone.

The MEZoo<sup>TM</sup> system resides on a dedicated server at the Centre of Research for Computational Sciences and Informatics in Biology, Bioindustry, Environment, Agriculture and Healthcare (CRYSTAL), University of Malaya, Kuala Lumpur. In order to educate the visitors on how to use this system, we have also designed a special signage which will be placed at the entrance of Zoo Negara (Figure 2).

### ALDABRA TORTOISE (*Geochelone gigantea*)

**Taxonomy**

- Kingdom: Animalia
- Phylum: Chordata
- Class: Reptalia
- Order: Testudines
- Family: Testudinidae
- Genus: Geochelone
- Species: Geochelone gigantea

**Size**

Its shell averages 120 cm (47 inches) in length. The average weight of a male is around 250 kg (551 pounds), but one male at the Zoo Negara weighs over 250 kg (551 pounds).

**Lifespan**

Over 80 years

**Habitat**

Grasslands, scrublands and swamps.

**Diet**

Primarily herbivorous. Aldabra Tortoises will eat grasses, flowers, and some small items. They occasionally prey on small invertebrates and carrion, including the bodies of other tortoises.

**Record**

1.66m recorded age is 255 years old tortoise

## REPTILES

### ALDABRA TORTOISE

Bahasa Melayu
English

**Scientific Name :** *Geochelone Gigantea*

#### Fun Facts

- 1. Oldest recorded age is 255 years old tortoise.
- 2. Males Aldabran Tortoise have longer, thicker tails than females.
- 3. They spend the mornings and early evenings eating, and they spend the hotter parts of the day in the shade or lounging in shallow water holes.

#### Taxonomy

Kingdom: *Animalia*  
 Phylum: *Chordata*  
 Class: *Reptilia*  
 Order: *Testudines*  
 Family: *Testudinidae*  
 Genus: *Geochelone*  
 Species: *Geochelone gigantea*

#### Key Facts

- 1. **Habitat**  
They are found on Aldabra Island, which is northeast of Madagascar in Indian Ocean.
- 2. **Diet**  
Primarily herbivores, Aldabra Tortoises will eat grasses, leaves, and woody plant stems. They occasionally treat in small invertebrates and carrion, even eating the bodies of other dead tortoises.
- 3. **Size and weight**  
Its shell averages 120 cm (47 inches) in length. The average weight of a male is around 250 kg (551 pounds), but one male at the Zoo Negara weighs over 300 kg (700 pounds).
- 4. **Lifespan**  
Over 80 years

## MAMMALS

### MALAYAN ELEPHANT

[Bahasa Melayu](#) | [English](#)

**Scientific Name :** *Elephas Maximus Hirsutus*

**Fun Facts**

- 1 This huge animal can tear down trees or pick up a blade of grass with their trunks.
- 2 Asian elephants communicate via rumbles, bellows, and moans. They also emit low-frequency infrasounds that can travel several miles.
- 3 Along with dolphins and great apes, Asian elephants are the only animals known to recognize themselves in a mirror.

**Key Facts**

- 1 **Habitat**  
Asian elephants inhabit grasslands, tropical evergreen forests, semi-evergreen forests, moist deciduous forests, dry deciduous forests and dry thorn forests, in addition to cultivated and secondary forests and scrublands.
- 2 **Diet**  
They feed on grasses, but large amounts of tree bark, roots, leaves and small stems are also eaten. Cultivated crops such as bananas, rice and sugarcane are their favorite foods.
- 3 **Size and weight**  
Asian elephants grow up to 21 feet long, stand up to 10 feet tall, and weigh up to 11,000 pounds.
- 4 **Lifespan**  
55 - 70 years

**Taxonomy**

Kingdom: *Animalia*  
 Phylum: *Chordata*  
 Class: *Mammalia*  
 Order: *Proboscidea*  
 Family: *Elephantidae*  
 Genus: *Elephas*  
 Species: *E. maximus*  
*Hirsutus*
